

USA NAIP Imagery: Natural Color

Tags imagery, NAIP, multispectral, United States, USA, NDVI, temporal, USDA, FPAC

Summary

This Natural Color imagery layer features recent high-resolution (1m or better) aerial imagery for the continental United States, made available by the USDA Farm Production and Conservation Business Center.

Description

This Natural Color imagery layer features recent high-resolution (1m or better) aerial imagery for the continental United States, made available by the [USDA Farm Production and Conservation Business Center \(FPAC\)](#). The [National Agriculture Imagery Program \(NAIP\)](#) acquires aerial imagery during the agricultural growing seasons in the continental United States. Approximately half of the US is collected each year and each state is typically collected every other year.

This imagery layer is updated annually as new imagery is made available. The NAIP program aims to make the imagery available to governmental agencies and to the public within a year of collection. The imagery is published in 4-bands (Red, Green, Blue, and Near Infrared) where available. Additional NAIP renderings include [Color Infrared](#) and [NDVI](#) (Normalized Difference Vegetation Index) showing relative biomass of an area.

This layer currently includes NAIP imagery from 2010 through 2023. You can discover and access other maps and layers available for NAIP through the [Living Atlas of the World](#) and through the [NAIP Imagery](#) group.

All imagery in this layer is sourced from the [NAIP Registry of Open Data on AWS](#).

If natural color visualization is your primary use case for NAIP, you might consider using the [NAIP Imagery](#) tile layer for optimal display performance.
